Montage Frame
DESIGN GUIDE

HOW TO USE OUR PHOTOSHOP TEMPLATES

STEP 1 - diagram top right
Open your template in Photoshop and make sure your "Layers" window is visible in the right hand column.

STEP 2 - diagram middle right
Bring your photo into Photoshop. Each mask layer is numbered to correspond with the opening on the template. In the Layers window make sure you place your image **above** the numbered "Mask" layer you want your image to go into.

STEP 3 - diagram bottom right
To insert the photo into the mask press -

　Control+Alt+G (if using a PC)
　Command+Option+G (if using a Mac)

The photo will insert behind the opening and will clip (or hide) any part of the photo that goes beyond.

You can now use the "Transform" edit tool to resize or rotate your image behind the mask.

To use the "Transform" edit tool press -

　Control T (if using a PC)
　Command T (if using a Mac)

You can be as creative as you like! Personalise your montages by adding solid colour boxes and/or text with your clients names or quotes.

STEP 4
Once you have completed your template save as a JPEG. You are now ready to upload your file with your order!
